Final-year Finance & Banking student at Moi University (graduating December 2026) who builds tools to solve real financial problems. Independently developed DCF, LBO, project finance, and integrated three-statement models covering Kenyan and U.S. listed companies, and during a SACCO credit attachment automated M-Pesa reconciliation with a self-built React tool and developed a loan pipeline MIS in Excel. Seeking an entry-level analyst role in investment analysis, corporate finance, or capital markets, available September 2026.

Education

Bachelor of Business Management, Finance and Banking - Moi University

Expected December 2026

Skills

- Financial Modelling and Valuation (DCF, LBO, Three-Statement Models and Trading Comps)
- Project Finance Modelling – DSRA, DSCR
- Programming – Basic Python for Data Analysis and React.js for Web Development.

Work History

Credit Intern

K-Unity Sacco, Wangige Branch

June 2026 - Current

- Identified manual M-Pesa reconciliation as a recurring bottleneck and built a statement analyzer that automated transaction extraction, inflow/outflow calculations, and Excel export, cutting processing time and eliminating manual errors.
- Built a loan pipeline MIS in Excel with management dashboards, relationship manager scorecards, and pipeline registers to give the branch real-time visibility into loan performance; adopted for use at the branch.
- Recognized member friction in accessing SACCO products and designed a prototype platform giving members online access to products, forms, and feedback channels.
- Analyzed branch contribution, revenue mix, and funding cost trends using group-level public annual reports to surface performance gaps.
- Advised members on SACCO products, loan terms, and account options, guiding them through the application process.

Financial Modelling Analyst (Freelance)

Kanyakla Ecofarms

March 2026

- Built a fully integrated 10-year financial model for an early-stage agribusiness, including operational revenue and cost drivers and integrated financial statements with cash flow forecasts.
- Performed DCF valuation using WACC-based discounting.
- Refined assumptions through multiple iterations to improve forecast reliability.

Independent Financial Modelling Projects

Self-Practice

October 2025 - Current

- Built more than 10 valuation models covering Kenyan and U.S. listed companies.
- Developed integrated DCF, LBO, and three-statement models from publicly available financial statements.
- Built project finance models incorporating construction financing, debt sculpting, reserve accounts, and operating cash flow waterfalls.
- Modelled acquisition scenarios involving goodwill creation, purchase price allocation, and multi-tranche debt structures.
- Conducted industry and company research to support forecasting assumptions and valuation analysis.
